INTRODUCTION

This Glamorgan Archives project is an innovative resource designed to inspire learners to explore the industrial past, present, and future of Wales. Through the lens of Glamorgan's records, the material unearths hidden contributions across four themes:

- Natural Resources and Wealth
- Innovation and Ethics
- People and Places
- Health and Community Activism

Central to this resource is a challenge to traditional narratives. The People and Places theme centres the roles of Global Majority heritage people, women, children, and animals, and is underpinned by two bespoke videos exploring the history of Black miners. These films illustrate the global nature of the 19th-century coalfields, showing how the world came to Wales just as Wales went to the world.

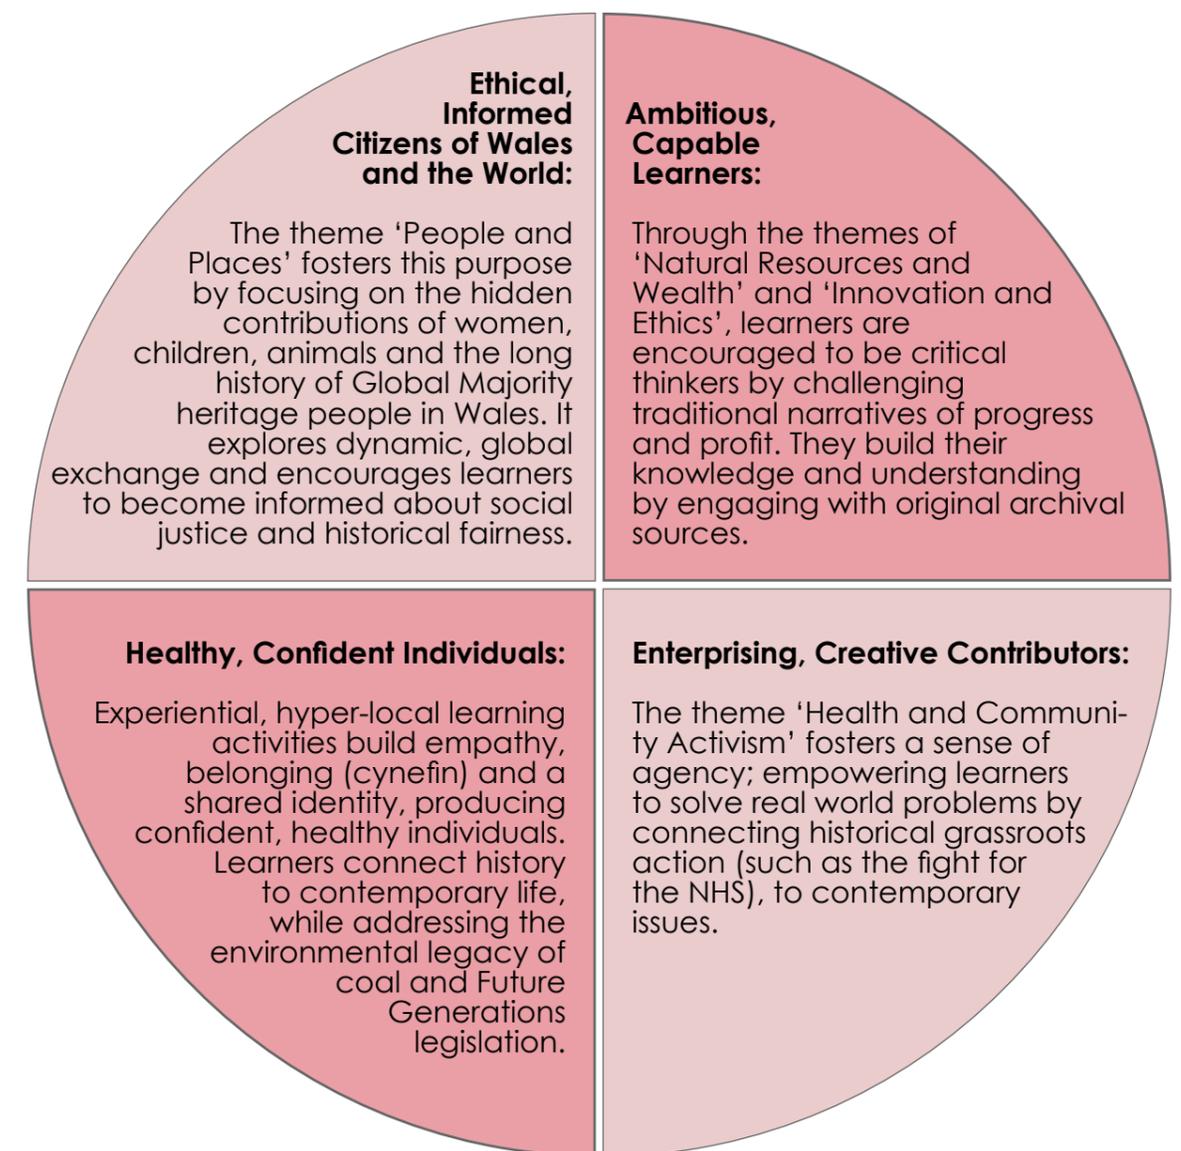

The Innovation and Ethics theme interrogates who is celebrated or ignored in history. By exploring the 'why' behind these narratives, learners develop a critical lens while examining the necessity of ethically grounding innovation to ensure future community wellbeing. Similarly, Health and Community Activism celebrates the collective action that shaped a nation, highlighting Global Majority practitioners who pre-date the NHS. By reflecting on memorials, it invites learners to envision an inclusive landscape of remembrance that honours those historically overlooked.

Supported by the BBC documentary Boom Town, the activities are experiential and theme-focused to maximise cross-disciplinary learning and cynefin. Addressing the findings of recent Adnodd and Estyn reports on how to support practitioners within the Curriculum for Wales effectively, this unit also aligns with the Wellbeing of Future Generations Act (2015). By highlighting 'What Matters' statements and Essential Questions, the resource empowers practitioners to facilitate authentic learning, and ensure learners understand the 'why' of their learning journey leading to application and progression across contexts.

Four Purposes

The project uses its four key learning themes to align strongly with, and develop, the Four Purposes of the Curriculum for Wales:

Enabling Learning

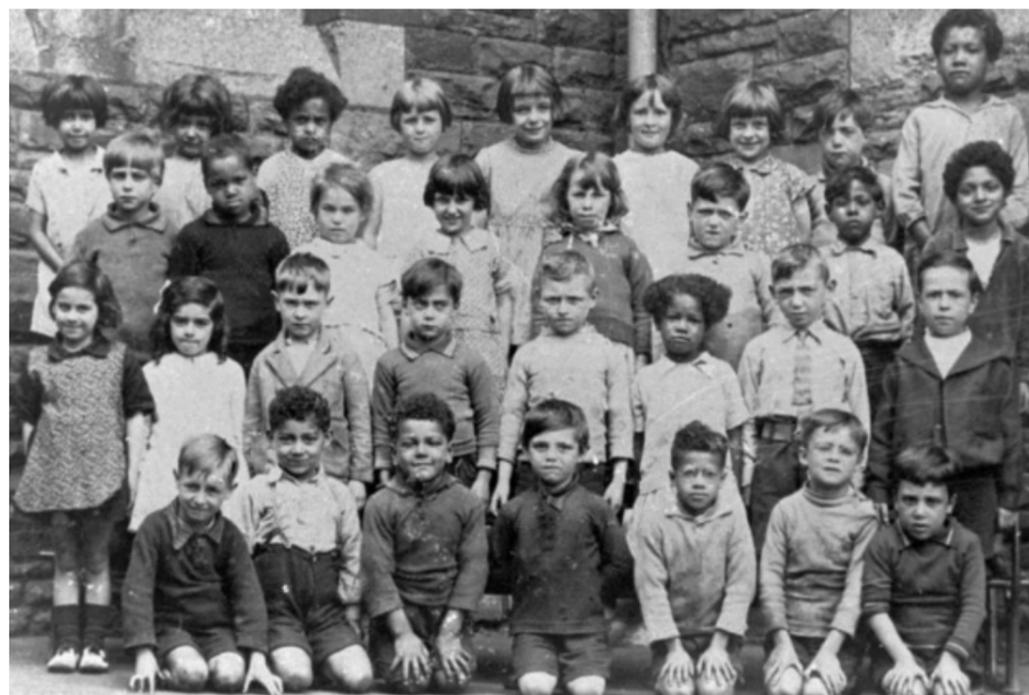

Enabling Learning, a core principle of the Curriculum for Wales, supports a curriculum that meets the needs of all learners through three interconnected elements: enabling adults, engaging experiences, and effective environments.

Adults create safe, inclusive spaces by responding sensitively to individual needs and valuing each learner's identity, language, and culture; fostering curiosity, collaboration, resilience, independence, and belonging. Resources and activities, such as Myya Helm's video, have been curated to support adults to respond sensitively and value each learner's identity, language, and culture when discussing, often ignored, historical legacies.

Learning experiences should be meaningful, challenging, and reflective of learners and their world, using active, multi-sensory, and cross-curricular approaches to build communication, creativity, and problem-solving skills. The use of hyper-local archive resources and Present and Future reflections offer engaging and relevant contexts that allow learners to deepen and apply their learning.

Well-designed indoor and outdoor environments further enhance learning by being inclusive, communication-rich, and supportive of emotional, physical, and cognitive development, offering flexible opportunities that inspire exploration, creativity, and a lifelong love of learning. To complement the printed archives in-school, there are a range of hyper-local experiential opportunities suggested within the resource as well as the opportunity to visit to Glamorgan Archives to organise a collection designed for your learners..

Know Your 'Why'

**Why is this learning important?
Why does it matter to your learners?
Why is it important at this point in their learning?
What is the purpose of the learning?**

Knowing your 'why' is essential when designing a curriculum that is both purposeful and responsive. This means grounding your decisions around how to use the archives and learning activity suggestions within a clear understanding of the learners in front of you: their identities, experiences, curiosity and aspirations. A strong sense of purpose in what, and how you facilitate learning helps ensure that your curriculum supports and realises the Four Purposes.

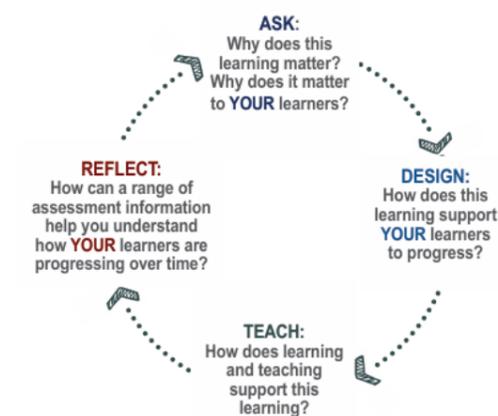

When educators are intentional about why they teach and who they teach, curriculum design for the learners in your class becomes a meaningful process which not only ensures that every learner is empowered to thrive in a changing Wales and a changing world but supports your own continuous professional learning within the Curriculum for Wales.

Essential Questions & Present and Future Reflections

The overarching and provocative Essential Questions help structure learning (and knowing your 'why'). They provide a focus for deep inquiry and ensure learning is connected and transferred to new contexts.

The Present and Future Reflections provide opportunities for learners to make connections between their learning and their own role in the future of Wales.

Process of Curriculum Assessment and Design

ASK	DESIGN	TEACH	REFLECT
Consider your learners' needs and their contexts. Choose learning that responds to needs and broadens horizons, for example learning could be framed as essential questions, big ideas, and so on. Think about current and proposed provision: why is that learning worthwhile at that point of a learner's development?	Make links to how different areas of learning and experience can contribute to specific learning. Consider how learning provides opportunities to develop a range of knowledge, skills and experiences. Ensure planned learning has the appropriate level of challenge, breadth and depth to allow progress.	Plan learning opportunities and learning environment to help learners make progress. Consider how curriculum experiences and learning environment can enable and enhance this learning. Analyse a range of assessment tools to notice what learning is taking place and observe any indicators of progression.	Consider a wide range of assessment approaches and information as indicators of learners' progress. Make judgements about learners' progress and share with professionals, parents and carers. Use this understanding to inform evaluations of teaching, curriculum and school effectiveness.

For further support with curriculum, assessment and design process

NATURAL RESOURCES AND WEALTH

What Matters Statements

Science and Technology: Forces and energy provide a foundation for understanding our universe.

Humanities: Our natural world is diverse and dynamic, influenced by processes and human actions.

Humanities: Events and human experiences are complex, and are perceived, interpreted and represented in different ways.

The South Wales coal seam is special because it has many different types of coal, including high-quality anthracite. The immense pressure from the geological forces in the area created the very best quality coal, making it extremely valuable. The pursuit of resource extraction resulted in a profound and enduring environmental impact on the landscape and communities of the region. This theme explores the enormous geological wealth found in South Wales: it examines how this natural resource became the foundation of a global industry, generating vast financial wealth. It subsequently prompts critical questions about who controlled and benefited from that profit.

SUGGESTED ACTIVITIES

The Formation of Coal: A Sensory Model

Working in groups, pupils could use clear jars to model geological strata by layering materials (soil, peat/leaves, sand, gravel). This hands-on, tangible activity serves as a powerful prompt to explain the immense pressure and time required for coal formation.

Applying a heavy object to the layers directly demonstrates the enormous physical pressure of overlying rock, linking this force to the geological process that created the highly compressed, valuable South Wales anthracite coal.

Cookie Mining

Cookie Mining is a hands-on activity where pupils use tools to extract 'coal' (chocolate chips) from 'land' (cookies) using 'tools' (wooden toothpicks). Students aim to maximise chip extraction while minimising cookie damage; simulating the economic and environmental trade-offs of real-world mining, with the damage representing the impact on the land. Varying chip densities can illustrate resource value and quality. The activity provides a tangible experience of extraction challenges and environmental consequences.

The Million Pound Debate: Does Risk equal Reward?

Learners could participate in a structured role-playing debate centred on the historic first million-pound coal deal struck at the Cardiff Coal Exchange. Groups representing the four key contributors: colliery owners/financers, miners, transport workers, and ship crew, could argue their case, justifying why their contribution, including the financial and physical risks taken, entitles them to the largest share of the massive profit. This activity explores the ethics of wealth distribution and the balance between risk and reward in the South Wales coal industry.

Essential Questions

- Beyond its quality, what factors made the "black gold" of South Wales such a powerful and valuable resource, globally and locally?
- What is the lasting legacy of coal on the landscape and communities of South Wales?
- How did the power of coal change the lives of the people in the South Wales Valleys?

£100M
FOR DISUSED
COAL TIPS

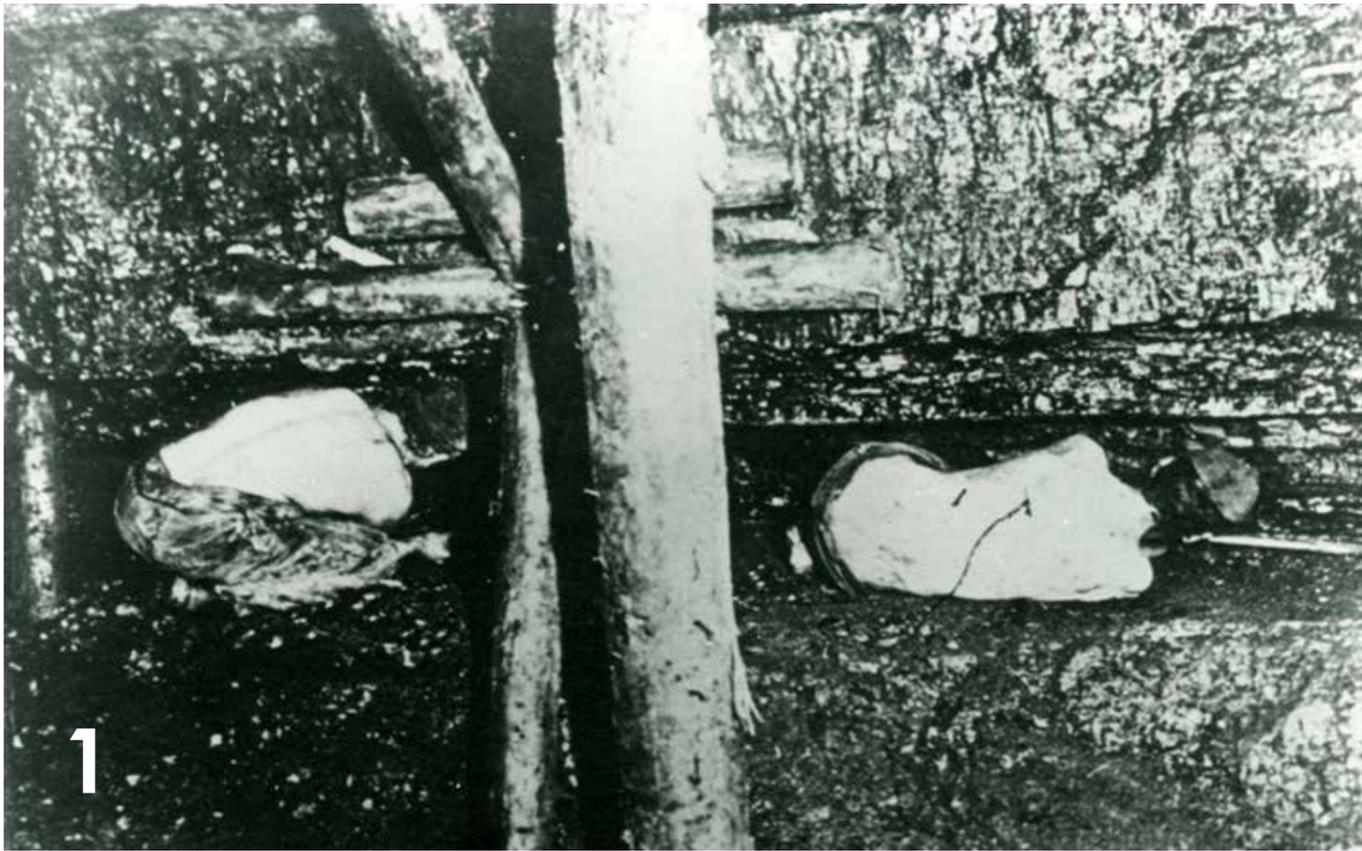

PRESENT AND FUTURE REFLECTIONS

Who should be responsible for making sure the old coal tips in Wales are safe and properly used today, people from the past, or people from the present?

Why does the huge profit made from valuable local resources often go to faraway owners while the community is left only with the long-term environmental and social problems?

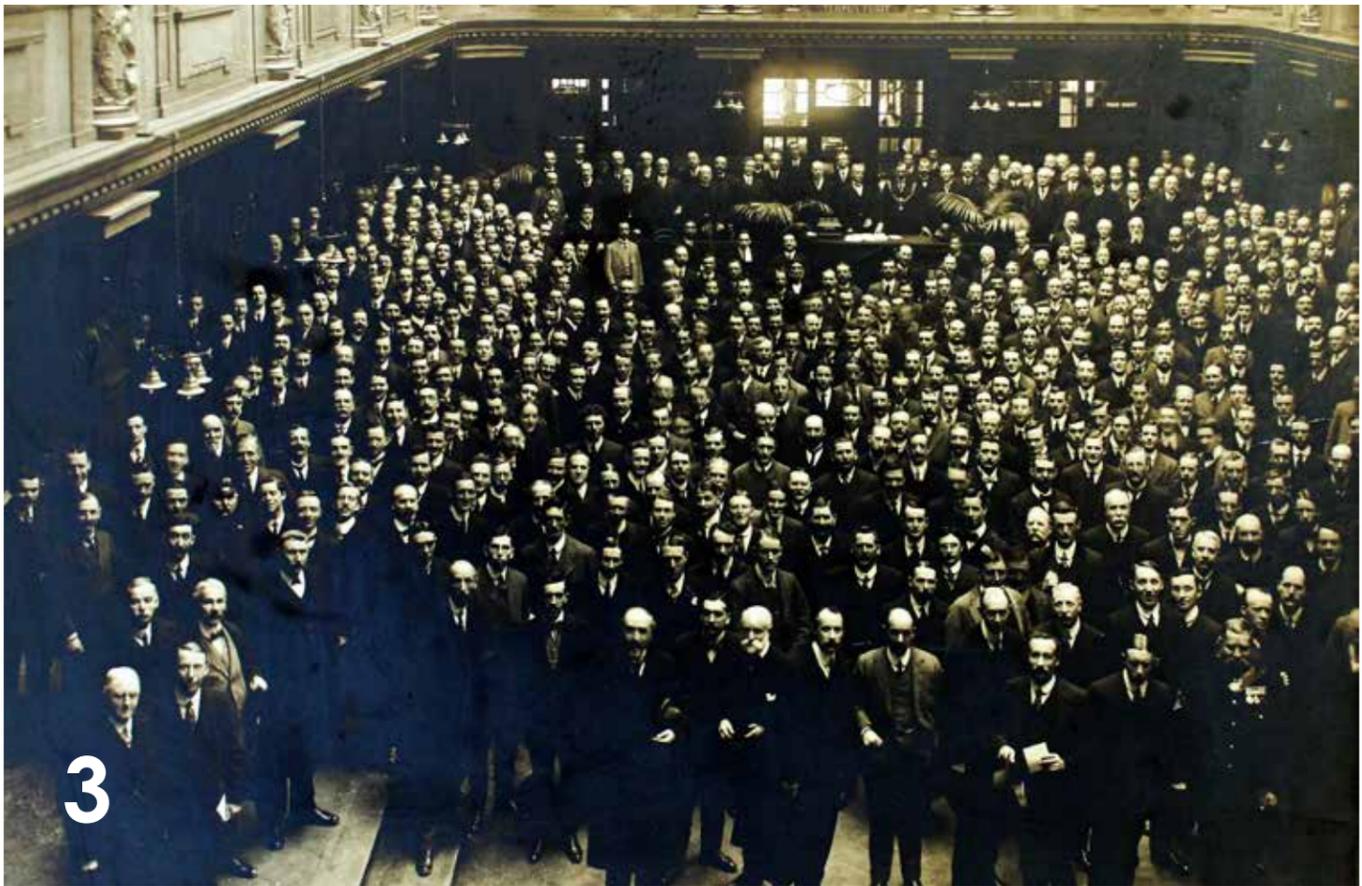

1

2

3

4

INNOVATION AND ETHICS

What Matters Statements

Health and Wellbeing: Our decision-making impacts on the quality of our lives and the lives of others.

Science and Technology: Design thinking and engineering offer technical and creative ways to meet society's needs and wants.

Humanities: Events and human experiences are complex, and are perceived, interpreted and represented in different ways.

Essential Questions

- How did Welsh coal connect Wales to the wider world and shape its identity?
- Who should be responsible for keeping workers safe and healthy when new industries grow?
- Did building railways and docks for coal help or harm South Wales in the long run?

This section examines the celebration of famous individual inventors and interrogates the ethical consequences of rapid change. It investigates how innovations like the steam railway and canal system were developed to maximise extraction, and critically assesses the ethical compromises made regarding worker safety, environmental impact and the lack of long-term thinking. It considers the prioritisation of individual profit over collective, sustainable wellbeing for future generations and deepens learning and reflections from the previous theme.

SUGGESTED ACTIVITIES

Innovators and the True Cost of Credit

Learners could research Richard Trevithick ([via the video resource](#)) and his pioneering Welsh locomotive to challenge the historical tendency to glorify chosen individual inventors like England's George Stephenson. Pupils could use early steam train archives to visually ground local history. Prompted by Trevithick's story, pupils could research other essential but overlooked innovators to highlight the collective effort required for progress and consider the reasons behind their lack of celebration.

- Lewis Latimer (Lightbulb/telephone)
- Elijah McCoy (Automatic lubricator)
- Hedy Lamarr (Frequency hopping/Wi-Fi)
- Dame Elizabeth Anionwu (Sickle cell treatment)

The Great Coal Race

Learners could work in teams to re-enact how coal was transported from Welsh mines to the docks, exploring stages such as hand-carrying, horse and cart, railway transport and shipping. Through relay-style challenges, pupils can build stamina, coordination and teamwork while also developing empathy for the physical demands faced by workers in Wales' industrial past. This activity encourages learners to think critically about wellbeing: comparing the hard, dangerous labour of the past with their own experiences of effort, rest and cooperation today. Reflection at the end of the session should help them connect physical and emotional health, fairness and responsibility.

Roads & Rails: From Extraction to Connection

This two-part mapping activity uses a simplified base map showing the South Wales coal seam and pre-marked towns and ports. Pupils apply a two-colour code to compare historical transport purposes.

Extraction Focus - Using Colour 1, pupils draw infrastructure built to move resources out of Wales, highlighting high investment in external trade such as the Glamorganshire Canal, historic rail routes (18th–19th Century) and the M4 Motorway.

Community Connection Critique - Using Colour 2, pupils trace routes linking Welsh communities such as the A470. The sparse result should prompt discussion on how internal valley road and rail investment halted after coal's decline, leaving poor local transport compared to extensive extraction routes created during industrialisation.

This visual comparison shows the long-term impact of extraction-driven planning over community needs.

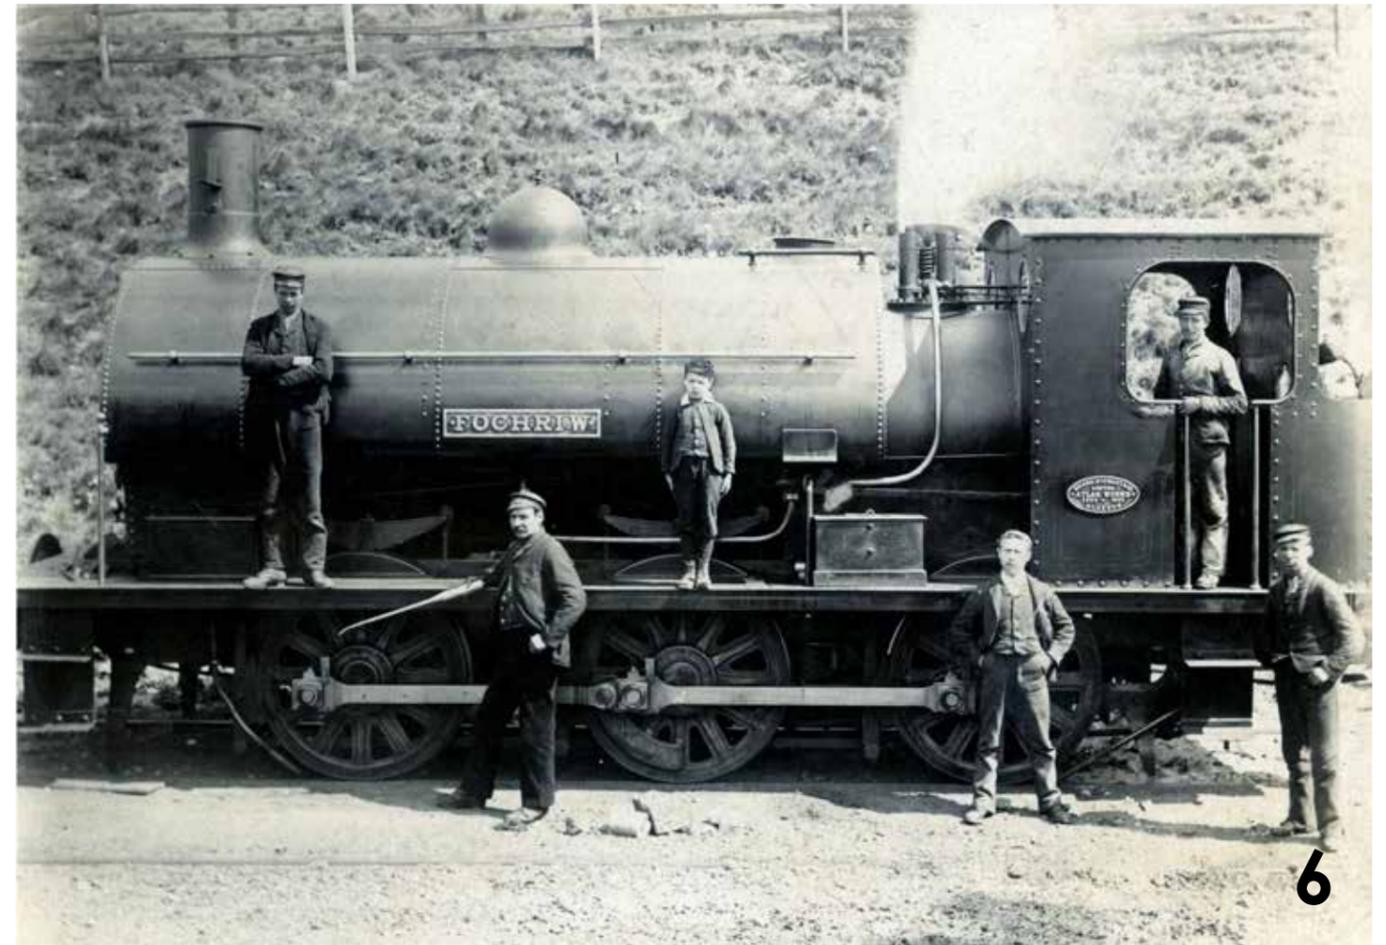

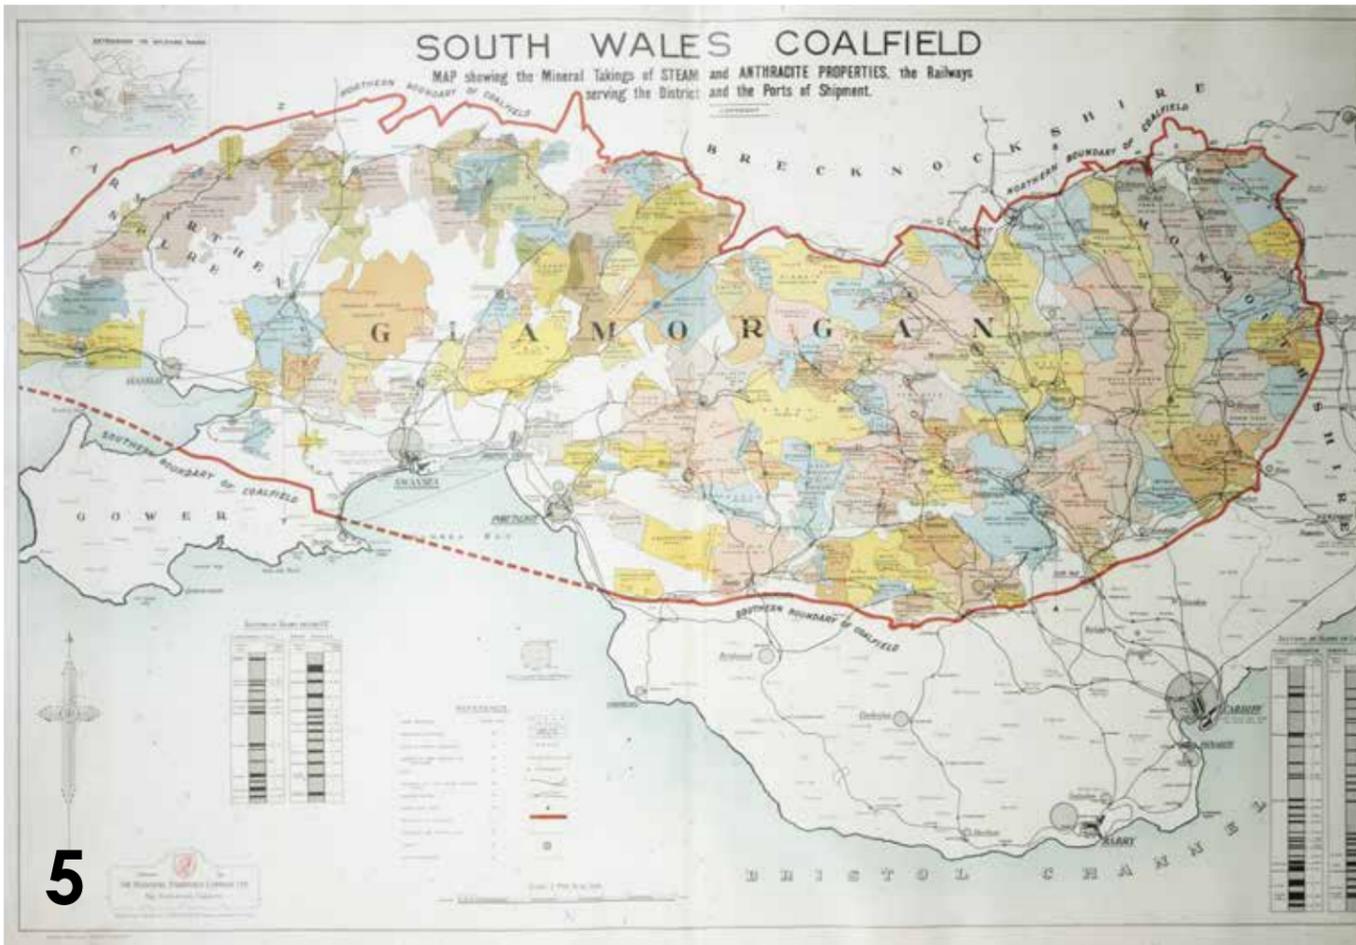

PRESENT AND FUTURE REFLECTIONS

When we make new technology, how can we make sure it helps people, jobs and nature, so we don't make the same mistakes as in the coal and rail industries?

Why do local resources fund distant profits whilst leaving communities with the clean up? How can we shift towards equitable ownership?

PEOPLE AND PLACES

What Matters Statements

Humanities: Enquiry, exploration and investigation inspire curiosity about the world, our past, present and future.

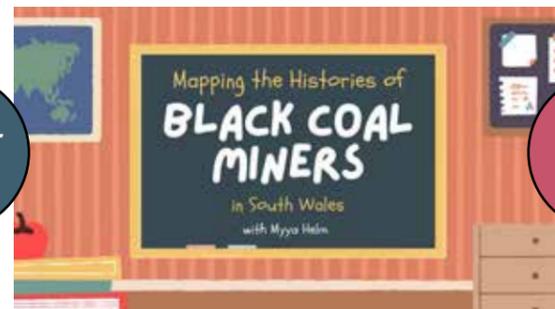

Humanities: Events and human experiences are complex, and are perceived, interpreted and represented in different ways.

Health and Wellbeing: How we engage with social influences shapes who we are and affects our health and wellbeing.

This theme focuses on the complete human story of the coal industry. It explores the vital two-way connection where 'the world came to Wales' (the industry welcomed workers from Global Majority heritage) and 'Wales went to the world' (as its coal and people powered the world). It examines how society often dismisses, ignores or undervalues the essential contributions of Global Majority heritage people in Wales and in general, and explores how their labour fundamentally shaped both the geography and the enduring collective identity of South Wales communities. People from other parts of Wales, the rural north and west, came to South Wales in search of work. People from other parts of Britain came too, especially people from the west of England where they had tin and coal mines. Many people came to Wales from Ireland during the Great Famine of 1845-1852. They created an Irish community in South Wales.

Teacher Video

Learner Video

Unpacking Global Origins

Pupils could watch the video created by **Myya Helm** (click links above) about the Black mining communities of the South Wales valleys. The video serves to highlight the long, continuous history of Black presence in Wales, challenging the common historical narrative of the valleys as white.

Pupils could research the countries and specific regions of the world (e.g., Caribbean nations, and West African nations) from which these Black miners travelled to Wales. They can then identify and map the long-standing global connections and diverse labour that has fuelled the local coal industry over generations.

SUGGESTED ACTIVITIES

Names Across the Waves: Archive Detectives

Pupils could explore global connections through real historical evidence by examining short extracts of crew lists from ships that docked in Cardiff, Penarth and Barry. Learners could look for clues: Where did the sailors come from? What were their jobs? What does this tell us about the world's link to Wales? Each group feeds back to the class about the different countries they found, and they could collectively plot those on a world map. Learners are then given modern shipping records to do the same task before comparing the differences and discussing the possible reasons for this.

Humanising Stories

Pupils could be introduced to three Welsh Global Majority heritage men - Amos Brown, Leonard Hinds and John Hinds - as real people with diverse roles in local communities.

Watching the video of Amos Brown (miner/pig keeper) and engaging with biographies of Leonard Hinds (Barbados migrant) and John Hinds (pit worker turned political leader), as well as using the Glamorgan Archives photo of the Hinds family, provide opportunities to build a visual, humanising connection. Pupils could also write a short narrative to humanise one chosen person's experience.

This activity focuses on specific biographies and archive and video evidence to reveal the diverse skills, global connections, and political potential that Global Majority heritage individuals brought to the South Wales mining communities.

Essential Questions

- Whose stories have been told about the mining industry, and how could we tell a more complete and fair history?
- Why were some groups in Cardiff's dock communities treated unfairly, even though everyone helped build the city's wealth?
- Do stories about Welsh miners show all the people and skills that made the industry work?

PRESENT AND FUTURE REFLECTIONS

Do stories about Welsh miners show all the people and skills that made the industry work? How could we tell a more complete and fair history?

How does our history with coal and global majority heritage workers show that Wales is a welcoming place, and how can we use that history to become a better [Nation of Sanctuary](#)?

What Matters Statements

Maths and Numeracy: Statistics represent data, probability models chance, and both support informed inferences and decisions.

Humanities: Informed, self-aware citizens engage with the challenges and opportunities that face humanity, and are able to take considered and ethical action.

Expressive Arts: Creating combines skills and knowledge, drawing on the senses, inspiration and imagination.

PEOPLE AND PLACES CONTINUED...

This section continues to explore the often hidden human story of the coal industry. Suggested activities examine how society undervalued the contributions of women, children and animals whose labour shaped the region. The Children in Mines activity uses the UN Convention on the Rights of the Child (UNCRC) to challenge historic child labour and prompt reflection on present-day injustices. Other activities analyse legislative motivation and impact on women's roles and labour alongside welfare recognition for animals, with both highlighting profit over ethics. By examining this often uncredited labour, the theme demonstrates how these contributions shaped South Wales' geography, industry and identity, prompting reflections on current societal and global rights issues.

Children in Mines

The purpose of this suggested activity is to investigate real images of child miners and reflect on their lives and rights. Learners could move between images of historical photographs of children in South Wales mines in pairs or small groups, noting what they see, think and feel. The facilitator could then read out short statements inspired by the mining photos (e.g., "Children worked 10 hours a day in the dark", "Every child should have time to play", "Children helped their families earn money", "Children deserve safe places to work or learn"). Learners could move along a "rights line", one end for Right/Fair, the other for Wrong/Unfair and justify their decisions. They could choose one historical photograph of a child miner and imagine what that child might say if they could speak to us now. They could then create a short diary entry or speech "if I had my rights..."

SUGGESTED ACTIVITIES

Digital Storytelling Project: Tip Girls and Coke Girls

Pupils could research the lives of women in Welsh mining communities both before and after the 1842 Mines and Collieries Act. They could create a short educational video that combines historical photographs, archival footage and voiceovers. This project could specifically highlight the transition of women from underground work to surface roles and analyse the impact of the 1842 Act on their labour, community status and economic roles. This activity uses digital media to explore a specific historical law's impact on a marginalised group, allowing pupils to analyse the changing nature of gendered labour and the social drivers and economic consequences of industrial legislation.

Pit Pony: Confinement and Code

Pupils could research the working life of a pit pony, focusing on its lifetime confinement (years without daylight) versus its economic contribution. Pupils could calculate the pony's estimated lifetime coal tonnage (e.g., 37,500 tons) and convert this volume into a practical measure, such as the number of homes it could have heated. This calculation establishes the massive economic value delivered by the animal's labour. Pupils could use the economic context to critically analyse the long delay in welfare legislation. They could create a visual comparison showing the time difference between and consequences of protective laws. They could plot the 1842 Mines Act, which increased the use of ponies by banning child labour, against the 1911 Pit Ponies' Charter, the law that finally guaranteed their welfare. This activity highlights the capitalist system's ability to exploit those without voices as well as unintended consequences.

Essential Questions

- Who was valued most in the coal industry, people, animals, or profit? What does this tell us about fairness and respect?
- We know from personal documents like birth certificates, that women lived and worked in the mines but why don't hear about them?
- Why might a community continue to break a law designed to protect them?

The archives show a Wales built by people of many languages, backgrounds, and global connections; how can we use a more 'complete' history to challenge narrow stereotypes and redefine what it means to be Welsh in the 21st century?

PRESENT AND FUTURE REFLECTIONS

What does the story of pit ponies tell us about how people cared more about money than animal welfare? How can that lesson help us make better choices for animals and the environment today?

13

HEALTH AND COMMUNITY ACTIVISM

What Matters Statements

Expressive Arts: Responding and reflecting, both as artist and audience, is a fundamental part of learning in the expressive arts.

Science and Technology: The world around us is full of living things which depend on each other for survival.

Humanities: Human societies are complex and diverse, and shaped by human actions and beliefs.

Languages, Literacy and Communication: Expressing ourselves through language is key to communication.

Essential Questions

- Who is responsible for keeping workers healthy and safe?
- How should a country decide what to spend its money on when it has limited resources?
- Do the best ideas for improving a country come from its leaders or from local people and communities?
- How can we recognise and celebrate the contributions of people from around the world who helped shape and deliver the NHS?

This theme focuses on the immense health burden created by the coal industry (e.g. diseases and injuries). It examines how communities were forced to organise their own support through grassroots activism and mutual aid societies to fight for safety and campaign for safer and better conditions. Crucially, the local success of models like the Tredegar Medical Aid Society directly influenced Welsh politician Aneurin Bevan in his vision for the National Health Service (NHS), demonstrating how Welsh activism at a community level fundamentally shaped national institutions. This links with Wales' innovative Wellbeing of Future Generations Act (2015), which prioritises people and places over profit.

Community Activism and Global Solidarity

Pupils could research community activism in the South Wales valleys (e.g., miners' welfare or pit closures). The film 'The Proud Valley' and the Manic Street Preachers' song 'A Design for Life' could be helpful to illustrate how the struggle of the Welsh miners has been represented in art and media.

Pupils could create a short presentation or display board celebrating the reciprocal relationship between Wales and the activist Paul Robeson. They could highlight why the miners' cause resonated with him and gave him strength, and how his support and that of others boosted the miners struggle for justice.

This activity uses art and media to connect local Welsh activism to a global freedom struggle, illustrating the power of international solidarity and demonstrating how key figures and cultural voices amplified the valleys' fight for social justice.

SUGGESTED ACTIVITIES

Memorials and Untold Stories

Pupils could research the history and purpose of local mining memorials (e.g. Albion or Senghenydd), investigating who they commemorate and why the memorials are important. They will also research the purpose behind new monuments like the Betty Campbell statue and other efforts to create commemorations of women in Wales such as [Elizabeth Andrews](#).

Pupils could audit the mining memorial to identify untold stories (e.g. the labour of women, Black miners, or pit ponies). They could create a formal proposal or design for a new local memorial to honour and permanently recognise one of these historically excluded groups, arguing for its place alongside existing commemorations. This activity connects historical research to civic action, allowing pupils to analyse the social function of memory and proactively correct historical oversight by demonstrating that new, inclusive memorials are essential for a complete Welsh history.

The Valleys' Visionaries

Dr Kristnalal Datta was one of the first doctors to arrive from India to provide healthcare in the rapidly expanding Rhondda valleys. Learners could use Dr. Datta's 1911 census entry in the Glamorgan Archives as a springboard to uncover his story in the Rhondda. They could explore how his proficiency in five languages and his free miners' hospital challenges traditional views of the Valleys. They could connect this with the NHS by watching a clip of [Michael Sheen discussing the play 'Nye'](#) (about Aneurin Bevan) to see how local activism in Wales led to the birth of the NHS. Learners could debate the challenges the NHS faces today, compared to the "Black Lung" and poverty witnessed by Bevan and Dr. Datta. Learners could then work in teams to propose an enhancement for a local 'Super Surgery' and suggest how a new wing or specialised space might use modern technology to better serve their community's specific health needs. They could pitch their ideas to a panel, explaining how their design carries forward the legacy of pioneers like Dr. Datta and Aneurin Bevan.

PRESENT AND FUTURE REFLECTIONS

What can we learn from the past, like the Tredegar Medical Aid Society, to make community care better today?

Should big decisions about health be made by one group for the whole country, or by smaller groups for each town? Why?

(To be filled up by the Enumerator.)

I certify that— 1. I have counted the names and houses in this Dwelling, (House, Tenement, or Establishment), and have ascertained their ages and sex, and have entered their names with the usual number of persons. 2. After making the necessary inquiries I have completed all entries on the Schedule which appeared to be defective, and have corrected such as appeared to be erroneous.	<table border="1" style="margin: auto;"> <tr> <td>House</td> <td>Persons</td> <td>Insane</td> </tr> <tr> <td style="text-align: center;">2</td> <td style="text-align: center;">4</td> <td style="text-align: center;">6</td> </tr> </table>	House	Persons	Insane	2	4	6
House	Persons	Insane					
2	4	6					

(To be filled up by, or on behalf of, the Head of Family or other person in occupation, or in charge, of this Dwelling.)

I declare that this Schedule is correctly filled up to the best of my knowledge and belief.

Signature J. H. Datta
Postal Address The Surgery, High St., Farnedale, Glam.

19

LIST OF ARCHIVE IMAGES IN THE DOCUMENT

1: Two colliers are pictured cutting out the soft centre bed of a thick coal seam in a South Wales colliery. The top coal would then be brought down and then the bottom coal listing to form the stall and access road. Note the angled timber holding the top securely while the men work at it.

2: Group of surface craftsmen, Great Mountain Colliery, c1906. A boy apprentice stands on the right. Colliery work did not just happen underground. Surface workers would have done a variety of jobs, including farriers, banksmen, hauliers, medical attendants, coal pickers, lamproom workers and clerks.

3: Built in 1888, the Coal Exchange in Cardiff became a key centre of the global coal trade and the site of the first million-pound cheque signing. This photograph taken after its refurbishment in 1911/12, shows businessmen involved in the coal and shipping industry.

4: Image of the tip at Albion Colliery, Cilfynydd. Part of the Schedule of Tips compiled by the National Coal Board in November 1967, following the Aberfan Disaster of October 1966. On the recommendation of the Aberfan Disaster Tribunal, comprehensive information about all National Coal Board tips was assembled for the first time, as part of the work of the tip safety committee.

5: Map of South Wales coalfield, c1920s. Map showing the mineral takings of steam and anthracite properties, the railways serving the district and ports of shipment. This map shows all the collieries which existed in South Wales at this time. It shows the railway lines which transported the coal from the mines to the ports, ready for export. It shows the ports where the ships were loaded up with coal to transport around the world.

6: Fochriw engine, built by Sharp Stewart & Co., 1896. This photograph shows a 0-6-0 engine, built by Sharp Stewart & Co. in 1890. Steam engines like this one would have drawn drams full of coal from the collieries down to the docks, ready for export around the world.

7: Glamorganshire Canal, steam-powered barge, c1910. Glamorganshire Canal Co. 504 barge. This was a steam powered barge working on the Glamorganshire Canal. The barge is photographed near the Queen's Hotel, Cilfynydd. This barge was probably delivering barrels of beer. In earlier years, barges like this one would have taken coal from the mines to the Docks. By 1910 most of the coal would have been transported by train.

8: View of Barry Docks: General view of Barry Docks and the surrounding area. Railway lines and wagons full of coal can be seen, waiting to be loaded onto the ships. We can also see the rows of shops and businesses that would have served the busy Docks area. And houses in the background where people connected to the Docks would have lived. c20th century.

9: The image shows a group of coal pickers. We know little about them, but they could be a family group, as they include men, women and children. It was taken in 1921, possibly during the coal strike of that year. Coal picking was when people went to the tips to find small pieces of coal that they could then use at home. It happened often during difficult times in the industry when people struggled for money. You can see filled sacks on the gambo (cart), and a young boy sitting on top of them. You can just about make out a boy struggling with a load of coal in the background.

10: Crew agreement for the SS Usk of Cardiff, 1911-1912. Every time a ship set sail

from Cardiff, the sailors on board that ship – called the ship's crew – had to sign an agreement with the captain – the ship's master – to say that they agreed to work on the ship for that voyage. Information about every sailor would be written on the agreement. Including his name, nationality, and address.

The Usk sailed from Cardiff in November 1911, bound for the port of Santos in Brazil. The voyage ended in November 1912. The crew includes 41 of 24 different nationalities.

11: Crew of the Steamer 'Hopemount', which was torpedoed and shelled by a German U- Boat 70 miles west of Lundy, The crew were rescued and taken to Barry, where this photo was taken, 1915.

12: Modern day crew agreement, showing the crew details* from a ship docked at No.2 dock in Barry in late 2025.

*Names have been changed for GDPR purposes all other details are correct.

13: This document comes from the Report on the Employment of Women and Children in the Iron Works of South Wales, compiled by William Menelaus. William Menelaus was a Scottish engineer. He became manager of the Dowlais Iron Works in Merthyr Tydfil. This page gives details of the number of persons in the employ of the Dowlais Iron Company at that time. They are divided by gender and by age, and by the type of work they were undertaking. We can see how many women and children were working in the Iron Works and its collieries at that time: 1st May 1866.

14: This picture shows a young collier boy riding [illegally] on the gun of a horse drawn set of tubs pulling out of an underground roadway. The coal seam can be seen at the side of the roadway. Horses played an important role in collieries - by the early-20th century there were 70,000 working in British mines.

Horses had to be the right size to work underground. Smaller horses would work on the roadways and larger horses in the more open areas. They had to be physically strong enough for the heavy work. They also needed the right temperament. Horses were returned if they were dangerous underground.

15: Abergorki Colliery, Female Surface Hauliers, c1880. Before the 1842 Mines Act, women, and children as young as six, were employed underground. Women hauled the coal to the pit bottom. Women later worked at the colliery surface, often hauling and picking coal. c.1880.

16: First Aid Room, Western Colliery, 13 February 1951. Nurse examining a patient in the first aid room at Western Colliery. With a high incidence of ill-health and accidents in the coalfield there was a need for medical treatment. Pithead baths began to be built at collieries in South Wales from the 1920s. The buildings often also included first aid and medical treatment rooms.

17: Penallta miner at home, c1930. 'Soon I'll be clean having my food!' - a Penallta miner having tea at home following a shift underground, still in his dirty work clothes. Before the opening of pithead baths, miners travelled home from work filthy with coal dust. Often wet with sweat and mine water, they risked contracting pneumonia, bronchitis or rheumatism. Women would work hard cleaning the coal dust from the home and preparing baths for miners, leading to health problems due to the heavy lifting required. Hundreds of children lost their lives due to falling into boiling hot bath water. Pithead baths meant that miners could wash and change their clothes before going home from work. This improved the lives of miners' and their families.

18: Deep Navigation Colliery, Treharris: a large group of workmen around Major David

Davies, later Lord Davies of Llandinam, chairman of the Ocean Coal Company, together with members of his family during a VIP visit to the pit, c1910.

19: This 1911 Census entry shows information about Dr Kristnalal Datta in Ferndale. Dr Datta was one of the first doctors to come to South Wales from India. He was born in Kolcatta in 1868. He practiced medicine in Ferndale from 1899 until his death in 1928. He was also an active member of the community, and was involved in politics, standing for election to the Council on several occasions.

HYPER-LOCAL ARCHIVES

INFERENCE SQUARE EXHIBITION

Pupils could interact in a group carousel with a gallery of archives set out in an exhibition format, describing what they see, what they think is happening, and what questions they have - to focus learning on their own knowledge, observations and curiosity.

Glamorgan Uncovered

By comparing historical and contemporary Ordnance Survey maps of Glamorgan, pupils can develop a deep understanding of landscape evolution and industrial heritage. By identifying visual clues to a map's age, learners move beyond observation to analyse drivers of change, such as the rapid expansion of the coalfields, growth of settlements and urbanisation.

This comparison provides a platform to discuss social migration, prompting pupils to look beyond the mines to the wider variety of people who moved to the region and the essential services, infrastructure, commerce, and housing, built to sustain these thriving communities.

Census Detectives: Uncovering our Global Streets

In each of the following localised sections, as well as localised archives, you will find a range of experiential opportunities, useful links and a **census archive** linked to the area. By examining the census returns, learners can act as historical detectives to uncover the social fabric of the past by investigating key variables such as ages, places of birth and the languages spoken within a community.

Students could be encouraged to map the complex dynamics of household members, identifying the roles of family, adopted children and boarders, while cross-referencing these details with recorded jobs to understand the daily lives of the residents.

Crucially, these records invite learners to speculate on the motivations for migration and settlement, prompting them to consider why individuals from both local regions and distant international locations were drawn to these specific households, whether driven by the search for industrial work, economic necessity or the global demand for local resources.

Tracing Our Roots: Mapping Our Local History

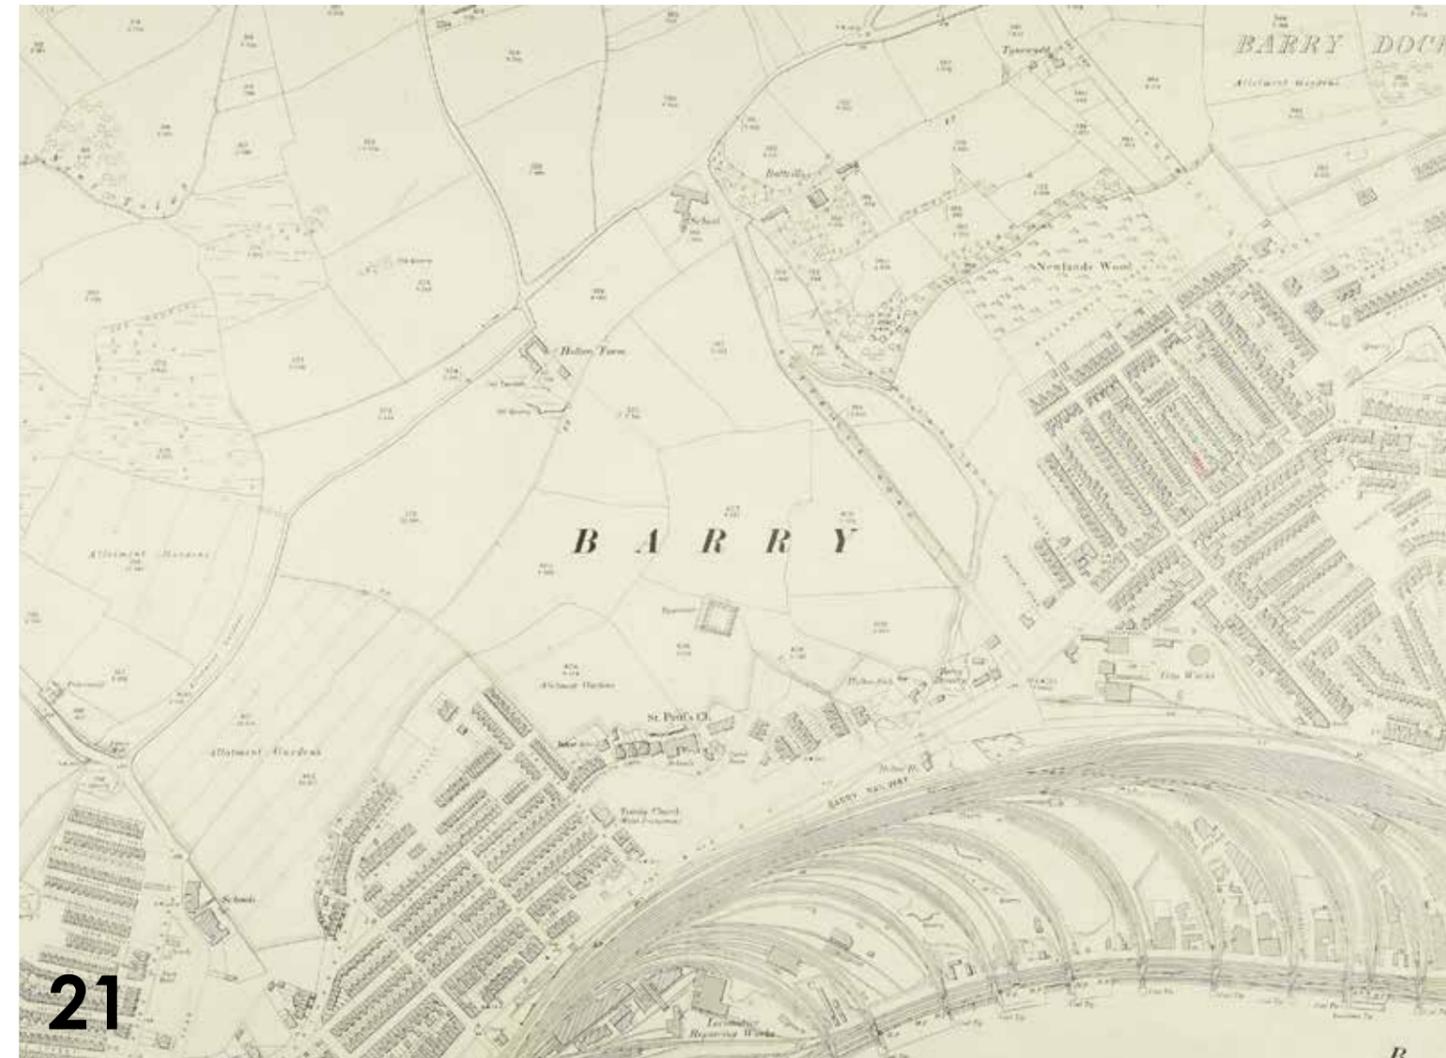

Take a look at the timeline on [page 20](#) that documents the history of the coal industry and its links to Cardiff. Can you become local historians and create a timeline for your local area?

- Late 18th century - The reserves of coal buried underneath the valleys of South Wales begin to be exploited. This was some of the highest quality coal in the world. The coal owners need a way of exporting it to markets across the world.
- 1794 - The Glamorganshire Canal is completed. The canal connects Merthyr Tydfil to Cardiff. Barges transport coal, and also iron, down to the port at Cardiff for export.
- 1839 - The West Bute Dock opens in Cardiff. The port facilities of Cardiff were not adequate for exporting such large quantities of iron and coal. The Marquess of Bute took steps to build a Dock at Cardiff. The first dock to open is the West Bute Dock.
- 1841 - The Taff Vale Railway opens. The railway follows the same route as the Glamorganshire Canal. It allows more coal to be brought to Cardiff Docks for export.
- 1859 - The East Bute Dock opens. The Marquess of Bute open a second dock at Cardiff and more docks will follow.
- 1887 - The Roath Dock opens.
- 1907 - The Queen Alexandra Dock opens.
- 1913 - Cardiff becomes the biggest coal exporting port in the world. Ships and their crews arrive in Cardiff from across the world to load up with coal and transport it to countries far and wide.
- 1926 - The General Strike lasts from 4th to the 12th of May across Britain. The following lock out of miners across the South Wales coalfield led to a fall in coal exports.
- 1930s - The Great Depression leads to a further reduction in coal exports.
- 1964 - Coal exports at Cardiff come to an end. Global demand for South Wales coal had continued to fall and exports at Cardiff came to an end.

BRO MORGANWG

Penarth and Barry Docks were vital to South Wales' coal trade during the industrial boom of the late 19th and early 20th centuries. Built to ease congestion at Cardiff Docks, Penarth opened in 1865 and Barry in 1889, connected by rail to the Rhondda coalfields. Barry quickly became the world's largest coal-exporting port, shipping over 11 million tons by 1913. These docks transformed the Vale of Glamorgan, attracting workers from across Britain and abroad, creating multicultural communities. Though coal exports declined after World War I, the docks remain symbols of Wales' industrial heritage and global influence.

Gwenllian Hinds (nee Lloyd) was born in Barry. She married Leonard Hinds, a seaman from Barbados who later became a coal miner. Gwenllian and Leonard had six children. Two of the eldest are pictured here with their mother.

One of their sons, John Hinds, worked as a coal miner in Bargoed before returning to live in Barry. He became active in politics. He was elected to Barry Town Council in 1958, becoming Wales' first Black and first Muslim councillor. In 1975 he was elected Mayor of the Vale of Glamorgan, becoming the first Black mayor in Wales and Britain.

Gwenllian's daughter, Elvira Gwenllian (Gwen) Payne, was elected to Vale of Glamorgan Council in 1972, becoming Wales' first Black female councillor. She acted as Lady Mayoress to her brother during his Mayoral term and became Deputy Mayor of Barry in 1979.

CARDIFF AND COAL - SUMMARY TIMELINE

Late 18th century - The reserves of coal buried underneath the valleys of South Wales begin to be exploited. This was some of the highest quality coal in the world. The coal owners need a way of exporting it to markets across the world.

1794 - The Glamorganshire Canal is completed. The canal connects Merthyr Tydfil to Cardiff. Barges transport coal, and also iron, down to the port at Cardiff for export.

1839 - The West Bute Dock opens in Cardiff. The port facilities of Cardiff were not adequate for exporting such large quantities of iron and coal. The Marquess of Bute took steps to build a Dock at Cardiff. The first dock to open is the West Bute Dock.

1841 - The Taff Vale Railway opens. The railway follows the same route as the Glamorganshire Canal. It allows more coal to be brought to Cardiff Docks for export.

1859 - The East Bute Dock opens. The Marquess of Bute open a second dock at Cardiff and more docks will follow.

1887 - The Roath Dock opens.

1907 - The Queen Alexandra Dock opens.

1913 - Cardiff becomes the biggest coal exporting port in the world. Ships and their crews arrive in Cardiff from across the world to load up with coal and transport it to countries far and wide.

1926 - The General Strike lasts from 4th to the 12th of May across Britain. The following lock out of miners across the South Wales coalfield led to a fall in coal exports.

1930s - The Great Depression leads to a further reduction in coal exports.

1964 - Coal exports at Cardiff come to an end. Global demand for South Wales coal had continued to fall and exports at Cardiff came to an end.

Cardiff transformed from a small town into the world's leading coal-exporting port during the late 19th and early 20th centuries. The Glamorganshire Canal (1794) and Taff Vale Railway (1840) connected the South Wales coalfields to the sea, enabling rapid growth. The Bute family built docks from 1839 onwards, including West Bute, East Bute, Roath, and Queen Alexandra Dock. By 1913, Cardiff exported over 10 million tonnes of coal annually, powering global steamships and the British Navy. The Coal Exchange in Mount Stuart Square became a hub for international trade.

This shows the East Dock: view looking north west from No 4 tip, east side, taken on 14 April 1883. People used to say that you could walk across Cardiff Docks without getting wet. This image shows how that was possible, with so many ships in the Dock at one time.

25 Ely Court (now Insole Court, Llandaff), home of coal owner J. H. Insole, c1898-1900.

26 Photograph of seven men on the deck of a ship near Cardiff c1910s

CENSUS

EXPERIENTIAL OPPORTUNITIES

27 **CENSUS OF ENGLAND AND WALES, 1911.** Number of Schedule 210
(To be filled up by the Enumerator after the census.)

Before writing on this Schedule please read the Examples and the Instructions given on the other side of the paper, as well as the workings of the Columns. The entries should be written in Ink.

The contents of the Schedule will be treated as confidential. Strict care will be taken that no information is disclosed with regard to individual persons. The returns are not to be used for proof of age, as in connection with Old Age Pensions, or for any other purpose than the preparation of Statistical Tables.

NAME AND SURNAME	RELATIONSHIP to Head of Family	AGE last birthday and SEX	PARTICULARS as to MARRIAGE				PROFESSION or OCCUPATION of Person aged ten years and upwards		BIRTHPLACE of every Person	NATIONALITY of every Person born in a Foreign Country	INFIRMITY	LANGUAGE SPOKEN
			State, for each Married Woman entered on this Schedule, the number of—	Particulars	Industry or Service with which worker is connected	Whether Employer, Worker, or Working on Own Account						
1. <i>Saïde Mahomet</i>	Head	40	Married				Boarding House-keeper	Own Account at Home	Constantinople Turkey	517	Turkish English	
2. <i>Sarah Mahomet</i>	Wife	30	Married	7 yrs 4	2	2			London	000	English	
3. <i>Alexander Mahomet</i>	Son	7							Cardiff Glamorgan		English	
4. <i>Kahda Mahomet</i>	Daughter	1 yr 7 mo							Cardiff Glamorgan		English	
5. <i>Abby Abram</i>	Boarder	30	Single				Ships Fireman	Merchant Service	Cyprus	702	Turkish English	
6. <i>Hassan Ghazm</i>	Boarder	36	Single				Ships Fireman		Constantinople Turkey	517	Turkish English	
7. <i>Spara Tipropoulos</i>	Boarder	32	Single				Ships Fireman		Constantinople Turkey		English	
8. <i>Terjio Nicholas</i>	Boarder	39	Single				Ships Dockerman		Constantinople Turkey		English	
9. <i>Abdullah Mamash</i>	Boarder	37	Single				Ships Fireman		Constantinople Turkey		English	
10. <i>Anastor Athanastor</i>	Boarder	35	Single				Ships Fireman		Constantinople Turkey		English	
11. <i>Almed Hassan</i>	Boarder	54	Single				Ships Fireman		Constantinople Turkey		English	
12. <i>Isolamed Abdul</i>	Boarder	30	Single				Ships Dockerman		Constantinople Turkey		English	

(To be filled up by the Enumerator.)

Male	Female	Total
10	2	12

(To be filled up by, or on behalf of, the Head of Family or other person in occupation, or in charge, of this dwelling.)

Write below the Number of Rooms in this Dwelling (Kitchens, Parlours, or Apartments). Count the kitchen as a room but do not count cellars, landing, lobby, closet, bathroom, nor warehouse, office, shop.

I declare that this Schedule is correctly filled up to the best of my knowledge and belief.

Signature: *Sarah Mahomet*
Postal Address: *114 Bala St. Cardiff*

Click here for full transcript of this archive

Penarth to Cardiff Bay walk - This video will help guide you from Custom House to important sites, such as the Norwegian Church, the Cardiff Merchant Seamen Memorial, the People Like Us statue, Mount Stuart dry docks, The Pierhead Building and Coal Exchange: <https://www.youtube.com/watch?v=K2gmUNxOI3U>

A visit to the Canal Quarter offers learners a firsthand look at urban regeneration, where the "daylighting" of the historic Dock Feeder Canal demonstrates how modern city planning can blend heritage preservation with sustainable, climate-resilient architecture: <https://www.cardiffcapitalregion.wales/investment-ops/canal-quarter/>

The Alliance sculpture in The Hayes connects to the coal industry by using its rising and falling hoop to track the same Bristol Channel tides that were essential for moving heavy coal ships in and out of Cardiff Docks. Its location at The Hayes acts as a symbolic gateway, linking the city's modern commercial center to the historic canal routes and docklands that powered the global coal trade: [https://kids.kiddle.co/Alliance_\(sculpture\)](https://kids.kiddle.co/Alliance_(sculpture))

All Hands sculpture (Custom House Street): Just a 2-minute walk from Alliance, this sculpture shows two massive fists pulling a rope. It sits directly above the culverted Glamorgan Canal - the very same canal used to transport coal from the valleys to the sea.

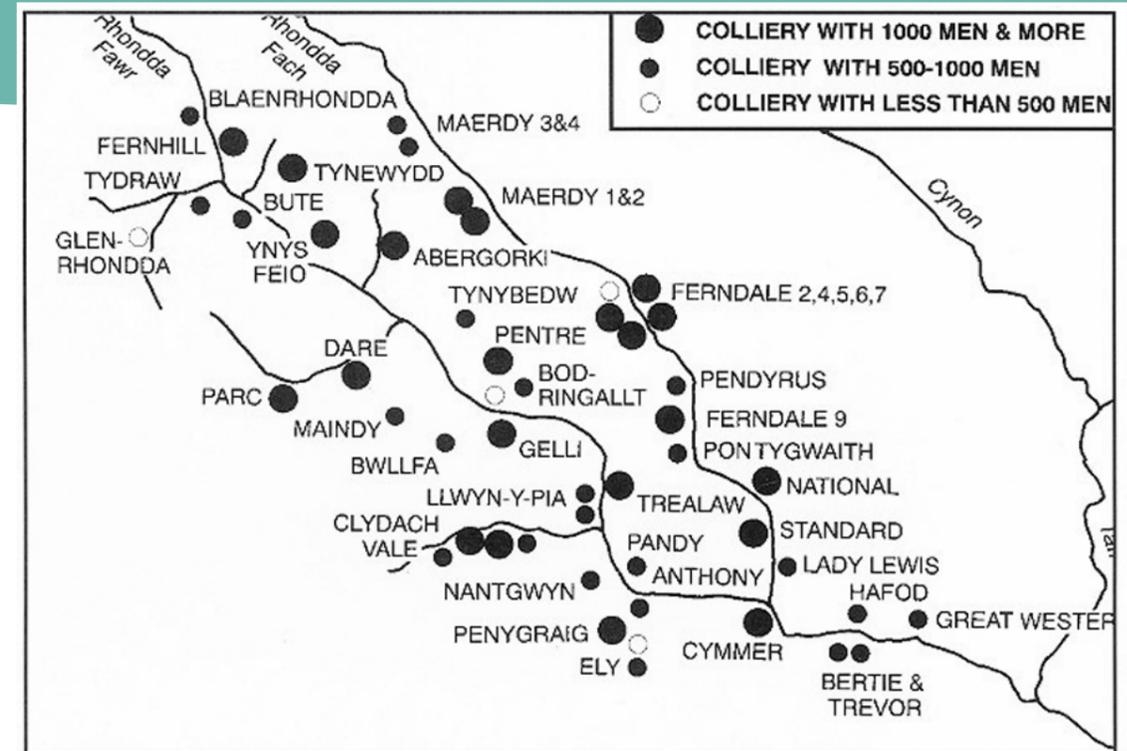

Mill Lane is known today for its lively bars and restaurants but this street was once the literal bank of the Glamorgan Canal. The canal wasn't just nearby - it was the street. The buildings on Mill Lane were originally canalside warehouses and hotels for the boatmen.

A visit to the Melingriffith Water Pump and nearby section of the Glamorgan Canal sites teaches learners how 18th-century engineering solved resource conflicts between industry and transport, specifically how the pump recycled water to keep the Glamorgan Canal operational. Today, the area serves as a vital case study in Cardiff's industrial heritage and the successful transformation of an "industrial artery" into a thriving nature reserve: <https://www.outdoorcardiff.com/parks/forest-farm>

RHONDDA

The Rhondda valleys became one of the world's most important coal mining regions during the late 19th and early 20th centuries. Originally sparsely populated, the area transformed after rich seams of high-quality steam coal were discovered, especially following the sinking of the Treherbert mines in 1855. Collieries multiplied and railways linked the valleys to Cardiff and other ports. By 1911, the local population had soared to over 150,000, with nearly 40,000 miners employed. Rhondda coal powered the British Navy and global steam transport, and made Cardiff the world's largest coal-exporting port.

Coal Mines in 1913

For more information on the mines in your area visit the [Northen Mine Research Society](#)

Tynewydd Colliery Disaster 'Rescued and Rescuers', 1877. This group photograph shows the Rescuers and Rescued following the Tynewydd Disaster of 1877. The five rescued are seated in the centre.

Top row left to right - Wm. Price, Dr Henry Naunton Davies, Thomas Griffiths, Charles Oatridge, John Williams, Isaac Pride, David Davies, David Minton, Thomas Rees, John Davies, John Howells, Richard Hopkins, Thomas Thomas, William Morgan, William Thomas, 'Morien' (Reporter).

Bottom row left to right - David Davies, David Jenkins, George Jenkins, David Hughes, Moses Powell, John Thomas, William Rawlins, Thomas Jones.

Front right lying on side with mandrel - John Griffiths.

Led by former miners, the Rhondda Heritage Park offers an immersive underground journey and a simulated dram ride that reveal how the region's coal once powered the global economy. Through interactive displays and original artefacts like the Old Forge, learners can explore the stark contrast between the lives of wealthy colliery owners and the communities that sustained the Welsh coal industry: <https://www.rctcbc.gov.uk/EN/Tourism/RhonddaHeritagePark/Home.aspx>

Pontypridd Museum offer tailored workshops and tours to suit your class as well as suggested walking tours: <https://www.pontypriddmuseum.wales/>

Zip World Tower illustrates the powerful regeneration of the historic Tower Colliery site, showcasing how former industrial landmarks can be transformed into world-class adventure destinations that boost the modern economy. This shift from coal extraction to high-octane tourism proves that Wales's heritage can be creatively repurposed to sustain local communities. <https://www.zip-world.co.uk/locations/tower-colliery>

Local walking and cycling trails: <https://www.rctcbc.gov.uk/EN/Resident/SportsandLeisure/SportRCT/Whatsinmyarea/WalkingandCyclingtrails/RCTWalkingandCyclingTrailMaps.aspx>

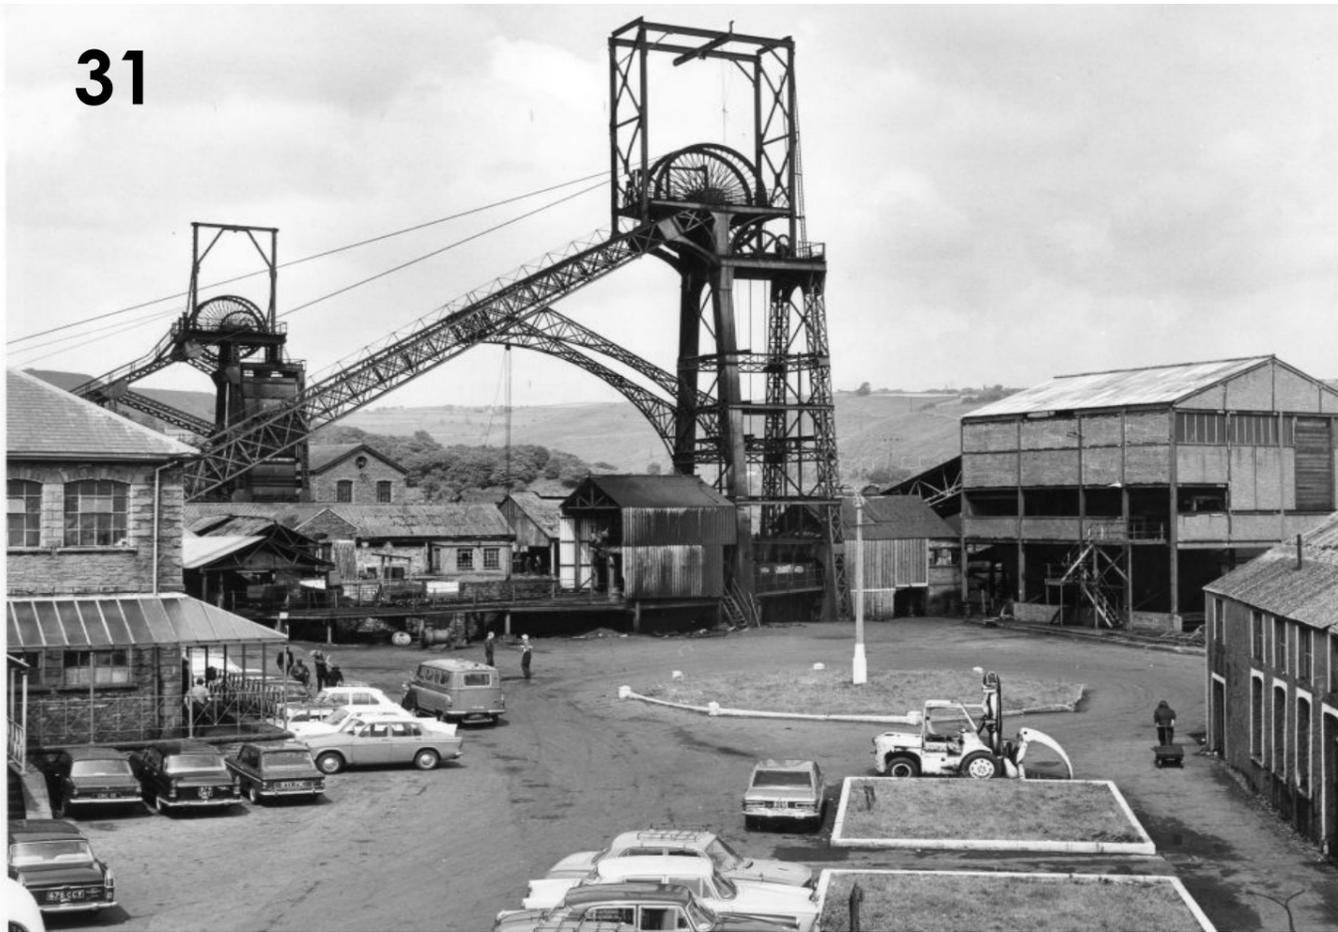

MERTHYR

Merthyr Tydfil was a key industrial hub in South Wales, originally famous for ironworks before coal became central to its economy. In the late 18th century, coal replaced charcoal for smelting, fueling rapid growth of ironworks like Dowlais and Cyfarthfa. By the 19th century, Merthyr's high-quality steam coal was in demand worldwide, powering ships and industry. Pioneers such as Lucy Thomas and John Nixon helped establish coal exports, with Merthyr Vale Colliery becoming a major producer. The town's population soared, making it Wales' largest settlement by the mid-1800s.

31

Above: Deep Navigation Colliery, 1972. Deep Navigation Colliery was located in Treharris. Work began on sinking the colliery in 1873. It closed in 1991.

32

Drams full of coal sitting in the sidings at Merthyr Vale Colliery, 1970. John Nixon began sinking Merthyr Vale Colliery in 1869, and the first coal was produced in 1875. The colliery closed in 1989. It was a tip from Merthyr Vale Colliery that slid onto the village of Aberfan in 1966.

33

This is a photograph of a tip girl, which forms part of the records of the Dowlais Iron Company. Records tell us that in 1866 there were 86 women and girls working in the Dowlais Iron Company's collieries. Tip girls would work at the surface, cleaning, sorting and cutting the coal.

Bike Park Wales - an example of repurposing former mining land for economic growth and tourism (including the UK's longest beginner's descent): <https://www.bikeparkwales.com/>

The Old Brecon and Merthyr Railway - the heritage line operates on a section of the historic Brecon & Merthyr Railway that was originally built in the 1860s to transport coal and goods through the industrial region before it closed in 1964: <https://www.visitwales.com/attraction/train/brecon-mountain-railway-530081>

There are interactive maps on We Love Merthyr's website 'Off the Rails' and 'A Petticoat Trail' walking tours: <https://welovemerthyr.net/visiting-merthyr-tydfil-town-centre/town-centre-trails/>

The Walk Wheel Cycle Trust's Trevithick Trail allows you to walk the route (9 miles) that the Penydarren locomotive took to make world history - by being the first steam-powered railway locomotive to pull a load on rails: <https://www.walkwheelcycletrust.org.uk/find-a-route-on-the-national-cycle-network/trevithick-trail-merthyr-tydfil-to-abercynon/>

The Crawshay family's Cyfarthfa Castle, built in 1825, is an excellent example of the wealth within the coal industry and comparison point with the homes of the miners: <https://www.visitwales.com/attraction/museum/cyfarthfa-castle-museum-art-gallery-536641>

Joseph Parry's ironworker's cottage, also built in the 1820s, not only demonstrates a typical dwelling of a work at the time and is also the birthplace of the composer of 'Myfanwy': <https://www.visitwales.com/attraction/museum/joseph-parrys-ironworkers-cottage-545671>

PEN-Y-BONT

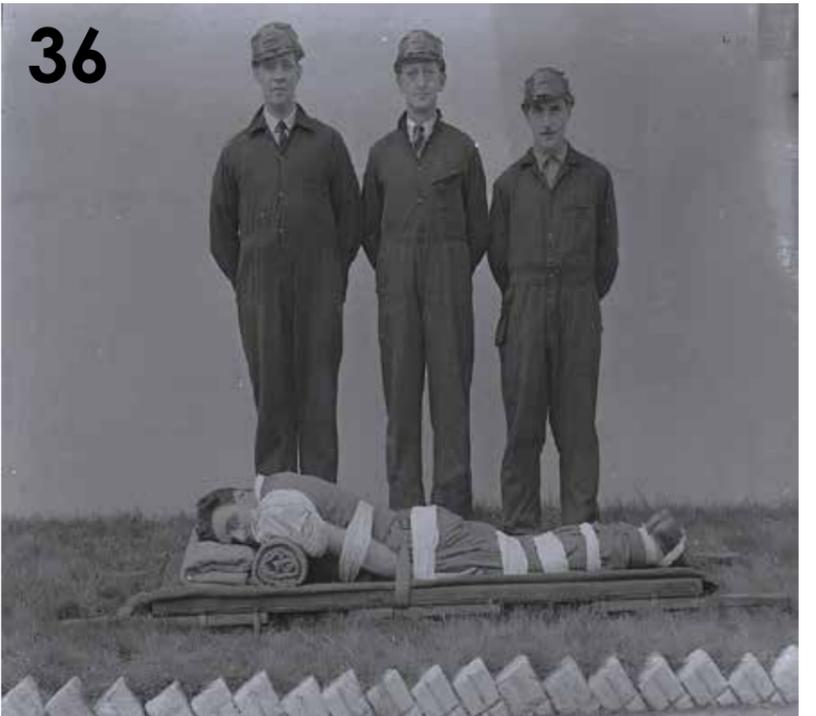

Bridgend played an important role in South Wales' coal industry during the 19th and 20th centuries. Key sites included Wyndham Colliery, which opened in 1865, and Parc Slip near Aberkenfig, where operations commenced in 1864. Parc Slip became infamous for the 1892 explosion that killed 112 miners this was one of Wales' worst mining disasters. Remarkably, many more lives might have been lost had it not been for the St Mary Hill Fair, which many miners were attending that day.

While the original deep mine at Parc Slip closed in 1904, the nearby Penllwyngwent Colliery opened in 1905, extracting high-quality steam coal until its closure in 1969. Although traditional deep mining declined in the mid-20th century, the Parc Slip site was later transformed into a major opencast operation, which remained active until 2008. Today, the land has been reclaimed as a nature reserve and a permanent memorial to those lost in the disaster.

EXPERIENTIAL OPPORTUNITIES

The Spirit of Llynfi Woodland showcases a remarkable nature reclamation project where a former colliery site has been transformed into a thriving community woodland and ecological haven. Along the Llynfi Valley Trail, visitors can reflect on this transition through the "Spirit of the Llynfi" sculpture, which beautifully integrates Dan Lock's poetry into the restored landscape: <https://naturalresources.wales/days-out/places-to-visit/south-east-wales/spirit-of-lynnfi-woodland/?lang=en>

The Garth Colliery Disaster Memorial stands as a solemn tribute to the lives lost in the 1897 explosion, honoring the local miners through a dedicated stone marker and a quiet space for reflection. This community-led project ensures that the tragedy remains a recognized part of the Llynfi Valley's heritage, serving as a permanent reminder of the bravery and sacrifices inherent in Wales' industrial past: <https://www.bavo.org.uk/lynnfi-valley-rivercare-group-erected-garth-colliery-disaster-memorial/>

CAERFFILI

Caerphilly developed as part of the South Wales coalfield during the 19th century. Collieries such as Van, Wernddu, and Caerphilly Colliery extracted coal from rich seams, driving local growth and employment. Rail connections, including Caerphilly Railway Station, enabled coal transport to Cardiff and other ports for export worldwide. The industry shaped the town's economy and community life, with generations working underground in challenging conditions.

39

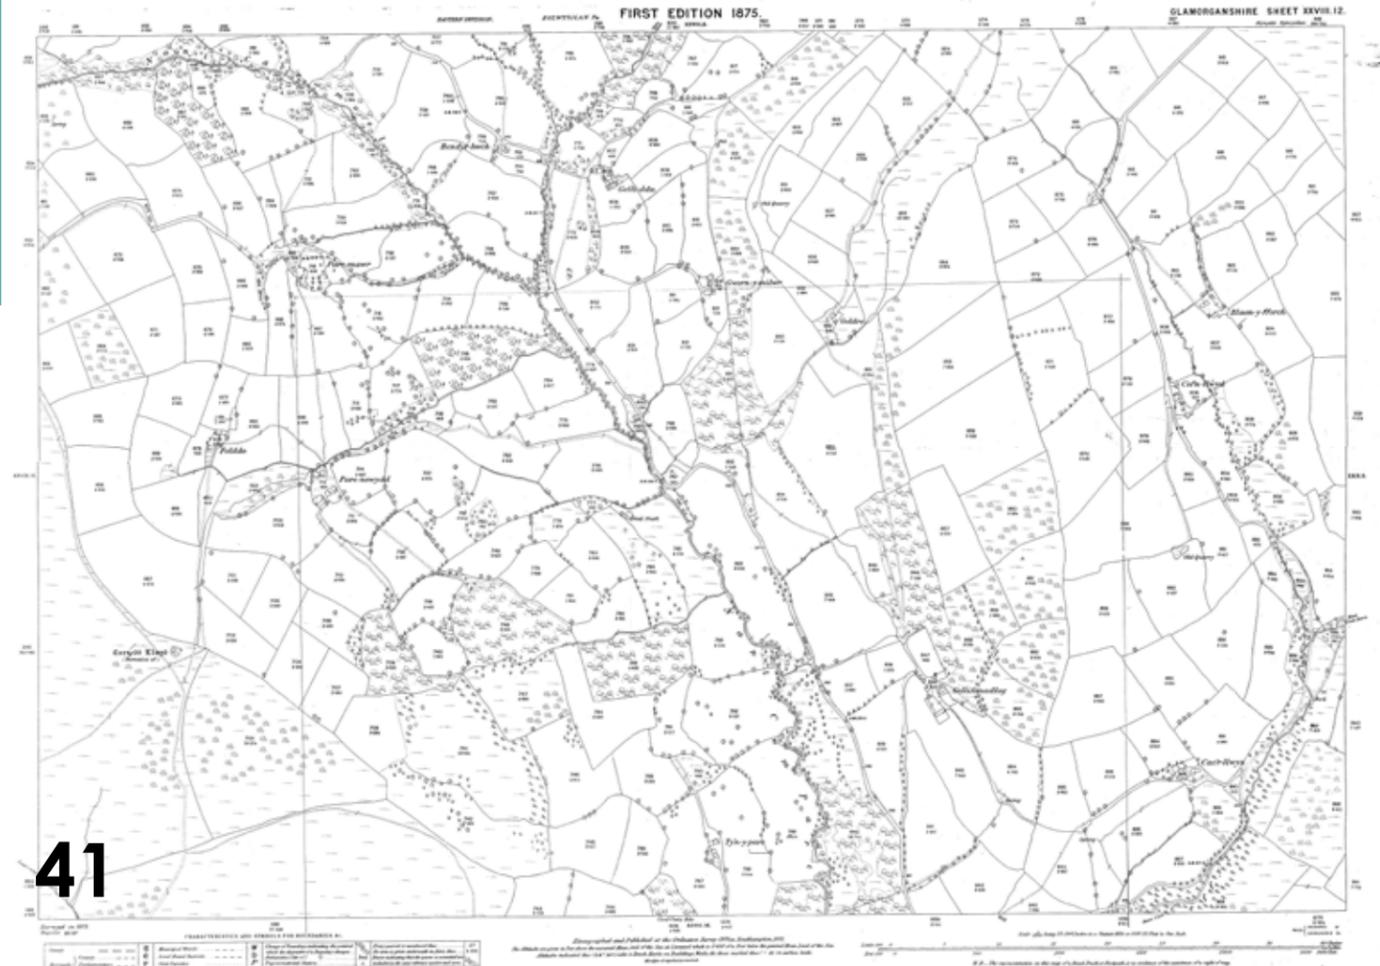

Senghenydd Colliery. Tragically, the Senghenydd community suffered the worst mining accident in British history on the 14th of October 1913, killing 439 miners and one rescuer after an underground explosion at the Universal Colliery.

40

42

CENSUS 43

CENSUS OF ENGLAND AND WALES, 1911.

Number of Schedule (To be filled up by the Enumerator after collection.) **177**

Before writing on this Schedule please read the Examples and the Instructions given on the other side of the paper, as well as the headings of the Columns. The entries should be written in Ink.

The contents of the Schedule will be treated as confidential. Strict care will be taken that no information is disclosed with regard to individual persons. The returns are not to be used for proof of age, as in connection with Old Age Pensions, or for any other purpose than the preparation of Statistical Tables.

NAME AND SURNAME	RELATIONSHIP to Head of Family.	AGE (last birthday) and SEX		PARTICULARS as to MARRIAGE.				PROFESSION or OCCUPATION of Persons aged ten years and upwards.			BIRTHPLACE of every Person.	NATIONALITY of every Person born in a Foreign Country.	INFIRMITY.	LANGUAGE SPOKEN.	
		For Infants under one year state the age in months as under: mouth, "one month," etc.	For all persons aged 15 years and upwards.	Write "Single," "Married," "Widower," or "Widow," or "Daughter," or "Boarder," or "Servant."	State, for each Married Woman entered on this Schedule, the number of 2--	Personal Occupation.	Industry or Service with which worker is connected.	Whether Employer, Worker, or Working on Own Account.	Whether Working at Home.	Whether Employed, or Working on Own Account.					
1 Thomas James	Head	55	Male	Married	2	0	4	0	Coal Miner	Hours 150	Worker	Wardle	British	491	English
2 Margaret James	Wife	55	Female	Married	2	0	4	-				Sancton	British	491	English
3 Lily James	Daughter	17	Female	Single								Wardle	British	463	English
4 Gertrude James	Daughter	15	Female	Single					Domestic Servant.	010	0	Home	British		English
5 Walter James	Daughter	11	Male	Single					School.	390		Wardle	British		English
6 Ted Brown	Boarder	20	Male	Single					Coal Miner	Hours 150	Worker	Wardle	British	492	English
7 George Williams	Boarder	21	Male	Single					Coal Miner	Hours 1	Worker	Wardle	British	490	English
8 John Florence	Boarder	25	Male	Single					Coal Miner	Hours 1	Worker	Wardle	British	733	English

(To be filled up by the Enumerator.)

I certify that—
 (1) All the ages on this Schedule are entered in the proper sex columns.
 (2) I have counted the males and females in Columns 3 and 4 separately, and have compared their sums with the total number of persons.
 (3) After making the necessary corrections I have completed all entries on the Schedule which appeared to be defective, and have corrected such as appeared to be erroneous.

Initials of Enumerator: **R.H.**

(To be filled up by, or on behalf of, the Head of Family or other person in occupation, or in charge, of this dwelling.)

Write below the Number of Rooms in this Dwelling (House, Tenement or Apartment). Count the kitchen as a room but do not count scullery, landing, lobby, closet, bathroom; nor warehouse, office, shop.

5 rooms.

I declare that this Schedule is correctly filled up to the best of my knowledge and belief.

Signature: **Thomas James**

Postal Address: **25 Henry St. Pargoed, Glamorgan.**

EXPERIENTIAL OPPORTUNITIES

Bute Energy's renewable energy work embraces the Wellbeing of Future Generations Act (2015) at Twyn Hywel (including opportunities to apply for the Community Benefit Fund and Youth Advisory Board): <https://bute.energy/twyn-hywel/overview/>

The Aber Valley Heritage Museum and Senghenydd Mining Memorial provide a poignant tribute to the victims of the UK's worst mining disasters, preserving the personal stories of a community defined by both tragedy and resilience. By exploring the memorial's symbolism and the museum's archives, learners gain a deep, emotional understanding of the human cost behind the industrial coal boom: <https://www.visitcaerphilly.com/en/listings/aber-valley-heritage-museum/>

The Caerphilly Miners' Centre preserves the legacy of a hospital originally funded by the miners' own pennies, now serving as a vibrant hub for community activities and social heritage. It provides learners with a powerful example of how a landmark of social history can be successfully repurposed for modern wellbeing: <https://www.caerphillyminerscentre.co.uk/>

EXPERIENCES BEYOND GLAMORGAN

The Taff Trail follows the historic path of the Glamorgan Canal and Taff Vale Railway, allowing pupils to physically trace the “pit-to-port” journey that coal took from the valleys to the global market. By exploring visible ruins like canal locks and stone sleeper blocks, learners can witness how a former industrial artery has been successfully regenerated into a vital green corridor for modern Wales: <https://www.visitwales.com/attraction/nature-or-wildlife/taff-trail-cardiff-brecon-562111>

Colby Woodland Gardens. The land sits at the end of Pembrokeshire's coal seam and has very narrow seams, so children were used to hauling the coal wagons out of the pits. Coal that was mined at Colby was taken to the coast and then by rail to Saundersfoot: <https://www.nationaltrust.org.uk/visit/wales/colby-woodland-garden/history-of-colby-woodland-garden#rt-industrial-roots-at-colby-woodland-garden>

Wrexham was once the heart of the North Wales coalfield, where the coal industry was inextricably linked to iron and lead production. **The Bersham Ironworks** <https://www.wrexhamheritage.wales/bersham-ironworks/> and **Minera Lead Mines and Country Parks** <https://www.wrexham.gov.uk/service/parks-and-countryside/minera-lead-mines-and-country-park> showcase this history.

The Big Pit National Coal Museum in Blaenavon is a world-renowned UNESCO World Heritage site and serves as the National Mining Museum of Wales. It provides pupils with a visceral look at the industry that shaped the nation's identity: <https://museum.wales/bigpit/>

Saundersfoot Harbour Located in the harbour, this centre tells the story of Pembrokeshire's coal industry. It explains how the harbour was specifically built to export local coal to ports around the globe: <https://www.saundersfootharbour.co.uk/activities/heritage-centres/>

GLAMORGAN ARCHIVES

Glamorgan Archives collects historic documents relating to the history of Glamorgan and its people. These documents include letters, diaries, maps, plans, photographs and more. We preserve and conserve these important documents, making sure that they last for as long as possible into the future. We make these resources accessible to people so they can use them to discover more about our past and how they connect to our present.

Glamorgan Archives **welcomes visits from school groups** of all ages to our building in the Leckwith area of Cardiff. School visits are free of charge and last up to two hours. We can accommodate a maximum of 30 children in one visit. Workshops delivered at the Archives will be tailored to your locality, and every visit will involve using original documents from our collection.

To find out more about visiting us, or to make a booking, just get in touch:

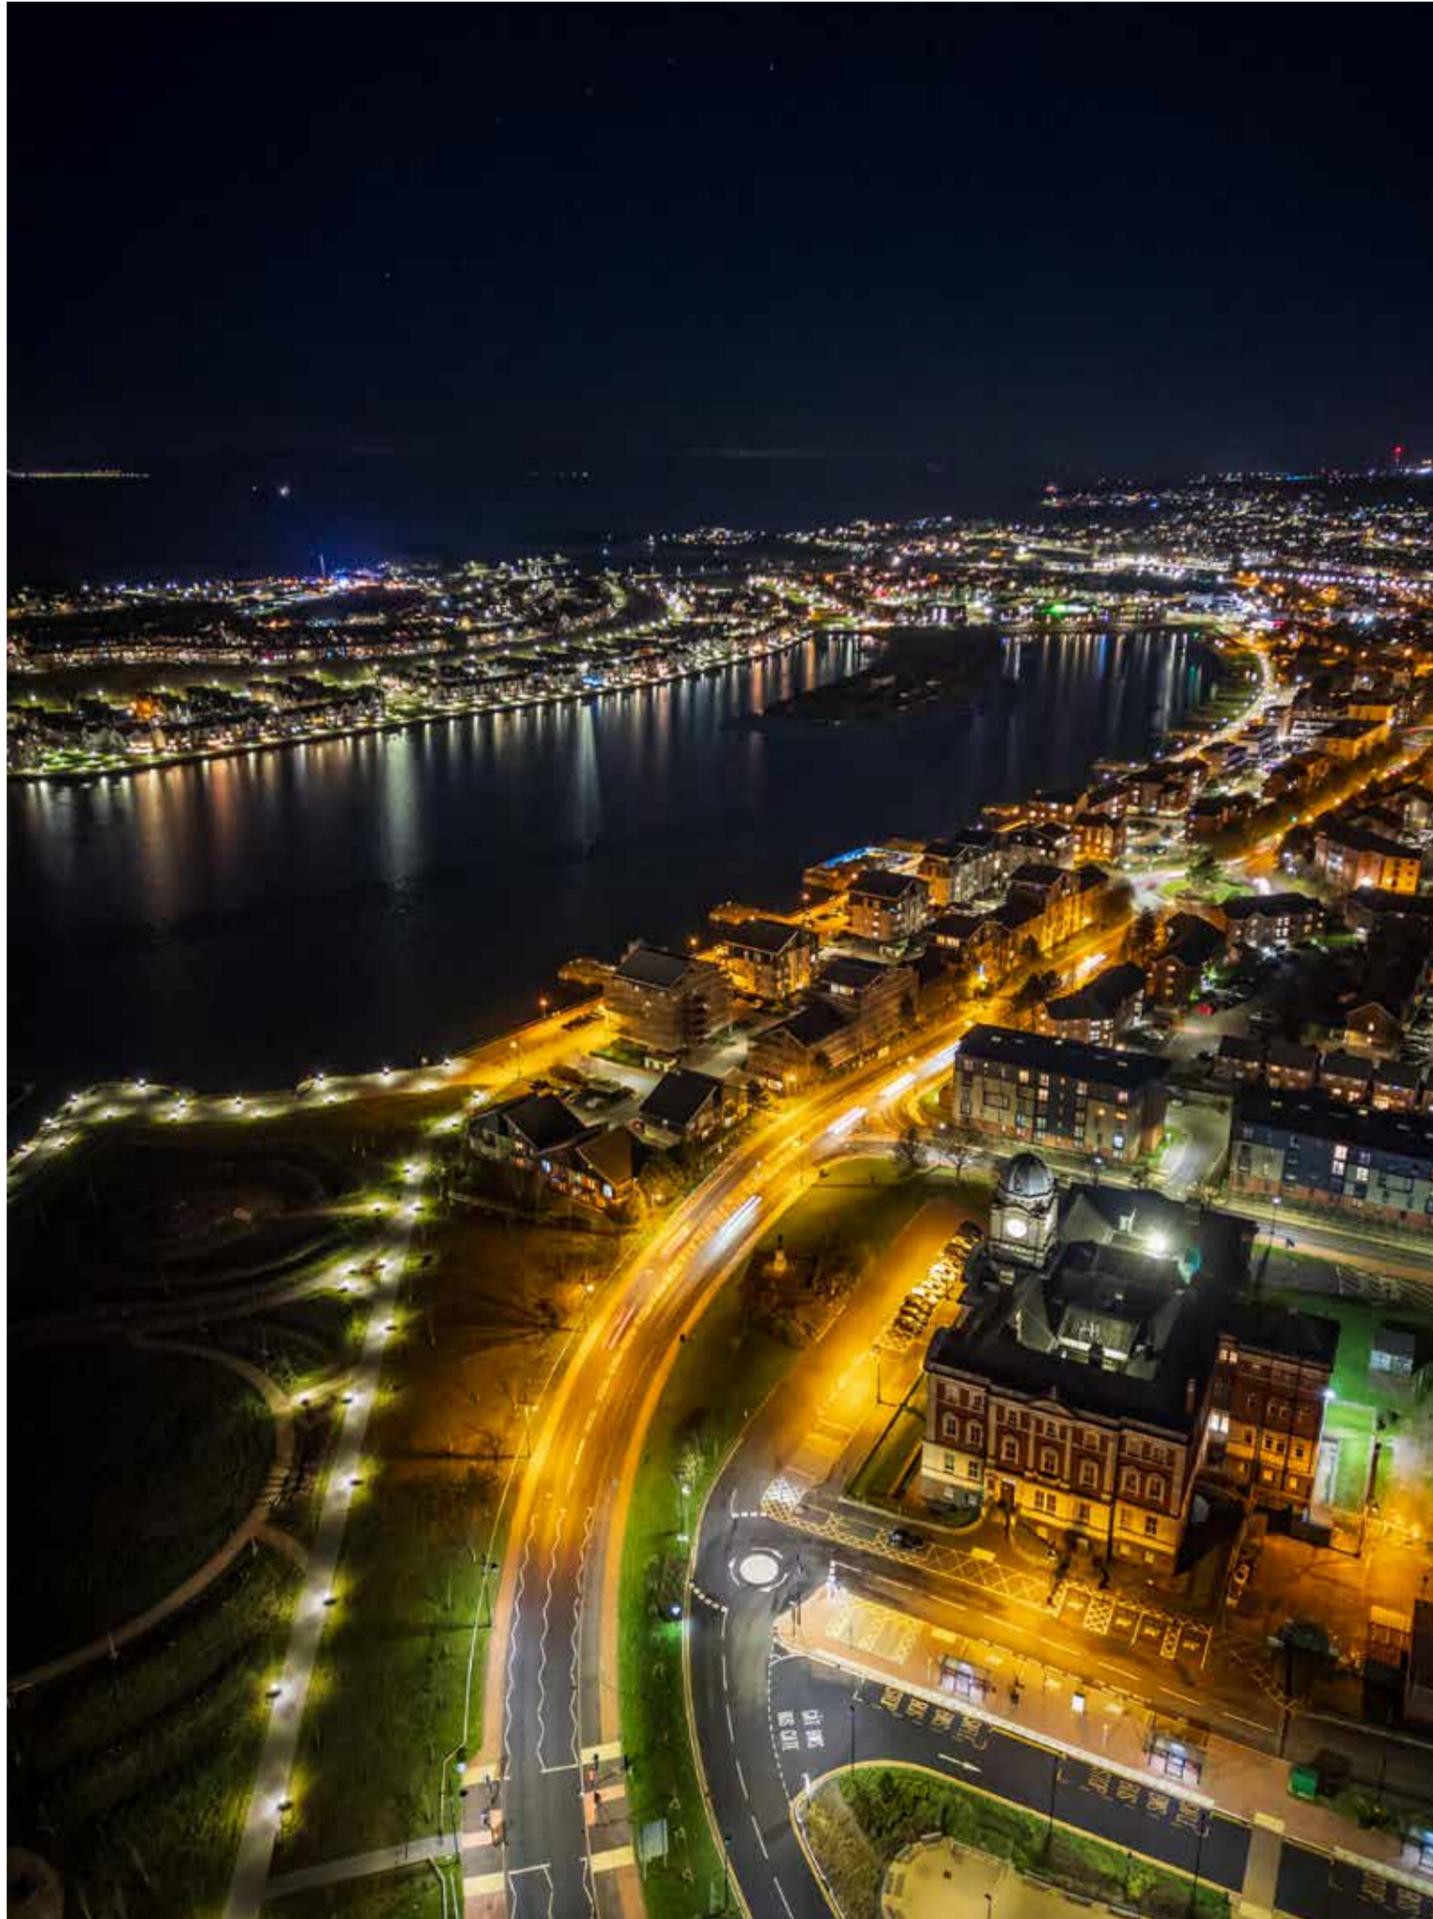

Email: glamro@cardiff.gov.uk

CENSUS OF ENGLAND AND WALES, 1911.

Number of Schedules **122**
(To be filled up by the Head of Family or other person in charge.)

Before writing on this Schedule please read the Examples and the Instructions given on the other side of the paper, as well as the headings of the Columns. The entries should be written in Ink.

The contents of the Schedule will be treated as confidential. Strict care will be taken that no information is disclosed with regard to individual persons. The returns are not to be used for proof of age, as in connection with Old Age Pensions, or for any other purpose than the preparation of Statistical Tables.

NAME AND SURNAME	RELATIONSHIP to Head of Family	AGE		PARTICULARS as to MARRIAGE	PROFESSION or OCCUPATION of Person aged 100 years and upwards			BIRTHPLACE of every Person	NATIONALITY of every Person born in a Foreign Country	INFIRMITY	LANGUAGE SPOKEN
		Male	Female		Former Occupation	Industry or Service with which worker is connected	Whether Engaged in Work or Working on Own Account				
1. Thomas James	Head	55		Married	Coal Miner	Hewer	150	Hambroth Pembrokeshire	British		English

8. John Florence	Boarder	35		Single	Coal Miner	Hewer	150	Bermuda W.I.	British		English

(To be filled up by the Enumerator.)

(To be filled up by, or on behalf of, the Head of Family or other person in charge, or in charge of this dwelling.)

Write below the Number of Rooms in this Dwelling (Room, Tenement or Apartment).
Count the kitchen as a room but do not count cellars, landing, lobby, closet, bathroom, nor water-closet, etc.

I declare that this Schedule is correctly filled up to the best of my knowledge and belief.
